

■ Prevention and mitigation of occupational health and safety impact directly linked to business relationships

1 Hazard Assessment of Exposure to Hazardous Chemicals

Explanation

The lead-free solder wire was not correctly labeled with a GHS hazardous chemical warnings.

Improvement Measures

It has since been relabeled with the corresponding hazard warnings in compliance with requirements.

2 Hazard Assessment of Exposure to Hazardous Chemicals

Explanation

The container of chemicals (catalysts) was not labeled with GHS pictograms.

Improvement Measures

The body of the catalyst container shall be labeled with GHS pictograms.

3 Hazard Assessment of Exposure to Hazardous Chemicals

Explanation

SDS & GHS information for chemicals were not available on site.

Improvement Measures

Appropriate SDS & GHS information have been made readily available at the work site.

4 Obstructed Fire Extinguisher

Explanation

Miscellaneous materials were placed in front of the fire extinguisher.

Improvement Measures

All items have been cleared.

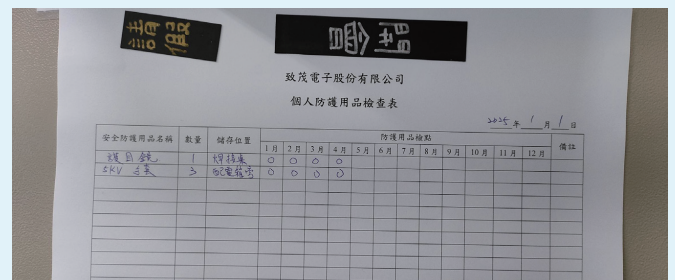

5 Automated inspection

Explanation

Personal protective equipment checklist was not updated.

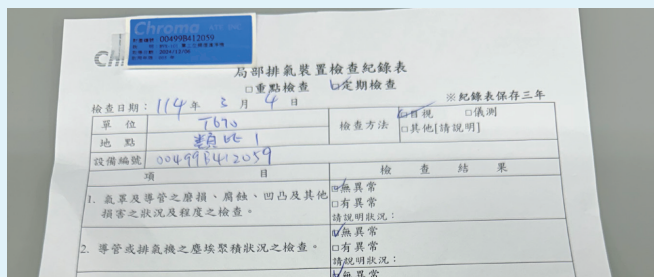

Improvement Measures

It has been reconfirmed and reviewed.

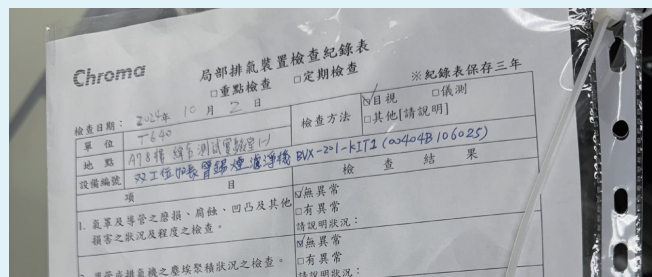

Explanation

The local exhaust ventilation equipment checklist was not in place.

Improvement Measures

It has been immediately established and reviewed.

Explanation

A large gap was found at the end of the conveyor belt, posing a risk of fingers being caught in the roller when personnel retrieve materials.

Improvement Measures

A cover plate has been installed over the gap to prevent fingers from accidentally entering the space and being caught in the roller.

Explanation

Access to the electrical distribution panel was obstructed.

Improvement Measures

The obstructions have been cleared to eliminate safety hazards.
